

**EVALUATION OF CHARACTERISTIC PARAMETERS OF THE
INDUSTRIAL WASTEWATER TO BE TREATED AT THE
METAMORPHOSIS WASTEWATER TREATMENT PLANT**

Antipollution Division, EYDAP (Water Supply and Sewerage Corporation of Athens)*

ABSTRACT

EYDAP's Wastewater and Septage Treatment Plant at Metamorphosis, Attica, is located in areas not served today by sewer networks. The following paper presents the results of a research program which contributed to the precise evaluation of the hydraulic and biochemical characteristics of the industrial wastes to be treated in order to have a good basis for the sizing of the new units.
