ABSTRACT

This paper reports some results of the Tempus Tacis Joint European Project (JEP–10435-98) dedicated to the development of the Centre of Ecological Education attached to the Zhitomir Institute of Engineering and Technology. In the frame of this project, new Master degree level courses were designed and have been introduced into the curriculum. The features of the curriculum as well as the problem of dissemination of knowledge about how to live in contaminated environment to have decreasing the radiation expose implication on human health are discussed.
